## Eagle Road Resurfacing with Medians

## Project Information

Idaho Transportation  
Department

# SUMMER CONSTRUCTION ADVISORY

The Idaho Transportation Department will repave Eagle Road (Idaho 55) between the eastbound ramps of I-84 and Fairview Avenue this summer. The project will take up to two-and-a-half months to complete and involves replacing the top two inches of pavement.

**Raised medians** also will be installed from Franklin Road north to Fairview, restricting some left turns. Law enforcement, the city of Meridian, and ITD support the use of raised medians to control access and increase safety.

*From Franklin to Fairview, **586 crashes** were reported in the last five years, resulting in **356 injuries and two fatalities**.*

Traffic control will consist of overnight (8 p.m. to 6 a.m.) lane closures, traffic shifts and restrictions. Two lanes each way with turn bays will be maintained at all other times.

ITD initiated the Eagle Road Arterial Study in 2003, involving the city of Meridian and the Ada County Highway District.

This project reflects the need to increase safety - the study prompted the raised medians - and more efficiently manage traffic. Medians also position Eagle Road as a state highway - a mobility corridor rather than a local street.
